

HIGH SPEED RURAL CONTROLLED ACCESS ARTERIAL TYPICAL SECTION

65 mph Design Speed

This roadway type would have a 65 mph speed limit within 250 feet of right-of-way. Direct cross road and driveway connections ARE allowed with this type of roadway, although connections are subject to access management criteria. This facility type is similar to US 98 as direct roadway connections to residential developments and businesses are permitted through access management. Bicycles are allowed within Controlled Access facilities on the paved shoulders, and a separate multi-use trail is provided to accommodate pedestrians and other trail users.
